

Product-driven Senior Software Engineer who architects and scales systems from the ground up. I thrive on building impactful products that solve complex challenges at a massive scale, having built systems for 100M+ users. I like taking technological bets and getting them to completion.

EMPLOYMENT

CTO **getparsec.ai** **July 2026 - present**

- **Designed and built the parsec platform** for token optimization across many agents and harnesses
- wearing multiple hats such as, Operations, Sales, Marketing, & hiring.

Senior Software Engineer **Oxen.ai** **Jan 2025 - April 2026**

- **Responsible for performance and correctness for the [Rust based FOSS VCS system for large datasets](#)**. < 60s to stage, commit or restore 1M files. Reduced errors arising from push & pull commands for 5TB files by 88%.
- **Architected the fine-tuning and data storage backend** enabling the deployment of secure, LLMs and VLMs
- My systems did 10,000 Finetuning runs and 15,000 model Deployments across 75 open weight models.

Senior Systems Engineer **NimbleEdge** **Jan 2023 - Aug 2023**

- **Led a team of 8 Engineers** on project execution and delivery of the Nimbleedge platform.
- **Designed Edge ML system with 100M MAU**. I built systems handling 20K requests per second. doing 50M inferences a day on EdgeML deployments.
- **Implemented Federated Learning (FL) Research such as FedAvg, Model Fine-tuning** in the edge, Client Selection Polling, Secure Aggregation, etc.papers into Deployable and maintainable applications.
- **Architected embedded edgeML SDK for android and iOS** built on top of Onnx runtime.

Software Development Engineer II **Skyflow** **Oct 2021 - Dec 2022**

- **Designed governance engine to have p99 response time from 150 ms to 5ms at 500K TPS** across 8 different regions. This was eventually consistent and allowed scheduled rollout of updates, when needed.
- **Redesigned control and data planes** cutting annual server costs by 67%.
- **Migrated from an Arangodb based backend to MongoDB**, with 80 Million records coming to about 100TB data, with zero downtime.

Platforms Engineer **Acko Insurance** **July 2019 - Oct 2021**

- **Designed and built** Internal CICD platform for application release across iOS, android, mac, and windows.
- **Managed more than 300 Releases over a period of 7 months**, with zero down time.
- **Drove adoption across 9 engineering teams**, migrating their services to a unified Rust platform for common services across different business functions.

EDUCATION

MS - Privacy Engineering **Carnegie Mellon University** **Aug 2023 - Dec 2024**

GPA 3.78/4, Coursework: Deep Learning, AI Governance, Browser Security, etc

BE - Instrumentation Engineering **Anna University** **April 2015 - April 2019**

GPA 3.9/4, Coursework: Control System, Digital Signal Processing, VLSI Design, etc

SKILLS

Languages: Rust, Golang, C++, Java, Python.

- **Infrastructure:** AWS (EKS, S3), Azure, Kubernetes, Docker, Kafka, gRPC, Terraform.
- **Databases/Storage:** Postgres, MongoDB, ArangoDB, Elasticsearch, Redis.
- **ML/Systems:** ONNX Runtime, Federated Learning, Ray, PyTorch.

ACHIEVEMENTS AND PUBLICATIONS

- SPARK grant for Entrepreneurship, CMU '24. For building Always on Voice/video assistant applications.
- Privacy Engineering Scholarship, CMU '23
- [Current State of LLM Risks and AI Guardrail Suriya G. et al.](#) (130 citations)
